Deven Rudani

Developer

I'm a software engineering student at SCET and currently Research on Salesforce developer learning path, in which I want to pursue my career.

Projects

2022(Intern)
Email Sender WebApp
Email Sender is a Web Application by which we can directly send the mail to recipient form Our Application. After getting this application we would not be required to go on any of existing mail portal like gmail, yahoo, etc..

2022(6 months)
Question From Paragraph
We were making Question Paper From Existing Question From Excel , Word. But there are various Application available on internet. And We found small problem like Why we Write Question Manually Instead of Automated Generate Question From Paragraph. Project is Generate Question From Paragraph with Answer easily using NLP And Flask.

2021(2 months)
Expense Manager
- Essential Flutter widgets
- Styling widgets
- State management with Inhertied widgets
- Working with async data and stream builders
- Offline Database
